

Software Web Developer - Online - Music Industry

MUZU™

Your Music Network

MUZU is an interactive TV network created by the people behind the music and an online business platform for the music industry. It protects the rights holders (bands, labels, festivals, venues etc) and generates income via an ad revenue share partnership.

The Role

We are looking for a **Software Web Developer** to join a growing team, working in a dynamic fast moving international entertainment environment. The successful candidate will be working on developing features and functionality for a large scale video based web site. The role is based in our Waterford office.

Responsibilities

- Work with the product team and engineering manager to define and develop software requirements.
- Develop features for a Web 2.0 application using JavaScript, AJAX, Actionscript and CSS within an MVC framework.
- Develop functionality to perform in a high volume environment.
- Work autonomously through the design and implementation stages when required.
- Develop software following the defined guidelines and using the defined tools.
- Use process tools for time management and bug tracking.
- Work with test team to resolve defects.

Requirements

- At least 2 years software development experience.
- Knowledge of database technologies – for example MySQL, Oracle, MS-SQL Server.
- Strong analytical and interpersonal skills.
- Logical approach to problem solving.
- Attention to detail and methodical approach.
- Good organisational and time management skills.
- Self motivated and ability to take ownership of specific projects.
- Experience of an agile development process desirable.

We will offer a competitive package related to experience and the opportunity to develop and grow as the company expands.

This is an exciting opportunity for the right candidate to work in the Entertainment / Music industry.
